

Mayor Ted R. Green's State of the City 2020

Mayor Green of East Orange, NJ announces at his State of the City Address launching the first Vehicle Green Zone using 4AI's MoB technology.

*"The City of East Orange is the pioneer in launching the first Vehicle Green Zone in history using a new technology called **Mechanic on Board** which helps the City's fleet of vehicles improve fuel economy, reduce maintenance and repair costs while also reducing carbon emissions on fossil fuel and alternative fuel vehicles.*

The City is leading by example of making sure our vehicle assets are preserved to minimize the costly expense of replacing vehicles before it's necessary. We're also showing the importance of cutting vehicle emissions which affects urban cities with higher rates of Asthma, Bronchitis, Emphysema, Heart Disease and Cancer.

Finally, I'd like to acknowledge East Orange born CEO of 4.0 Analytics, Mark Scotland, and his team for *being the first to develop this technology and for helping us achieve this historic milestone."*

-Mayor Ted R. Green
